

## OGRO - Nowy System Ogródzeń (OGRO - A New Fencing System)

ul. Mickiewicza 4  
49-100 Niemodlin  
Opole Voivoideship  
Poland

We are a private company and a manufacturer of metal fences. Our plant is located in Niemodlin near Opole in the Silesian region in Poland. We have been manufacturing metal products since 1979 and specializing in manufacturing modern gates and fences tailored to individual needs of both private and commercial customers already for 20 years.

All OGRO system fencing elements are made from individually designed steel profiles in our plant. After completion of bending, cutting and welding, the elements are HOT DIP GALVANIZED on the outside and inside in liquid zinc at 450 Celsius degrees. Then, after applying the anti-corrosion coating, the elements are POWDER PAINTED and heated in furnaces at about 200 Celsius degrees. Such surface protection guarantees trouble-free use without maintenance for several decades. All our technologies are certified and we also provide our own Extended Warranty Certificate for Anti-Corrosion Protection for a period of 10 years. The certificate is backed by international PN, DIN, EU standards.

### Contact :

A novelty in our offer - for other fencing industry manufacturers, we have semi-finished products for fence production in our OGRO system in a WHOLESALE OFFER. We are looking for buyers from building and trade sectors. We can start our cooperation immediately following a few simple rules: we create a project, accept an order, we sell products for cash or prepayment, and we offer transportation. Please send inquiries to our e-mail, call us or get in touch with us using instant messengers. Our staff will answer your questions immediately..

We invite you to familiarize with our website [www.ogro.pl](http://www.ogro.pl).
